- Features

Explore Boost.space features for seamless data management and workflow optimization. Discover Boost.space integration capabilities, connecting with 2000+ apps for streamlined data synchronization. Organize and enrich your data effortlessly with personal and shared labels, and stay updated with notifications. Track specific records with the 'Watch' function, access Boost.Space on mobile, and experiment in the Sandbox environment risk-free.

Segmenter

The Segmenter helps Boost.space users handle large datasets by creating filtered segments. This speeds up data loading and allows easy reuse of filters in the Integrator.

Custom fields: Formula

Discover how to leverage the Formula custom field in Boost.space to perform calculations, apply logical conditions, and manipulate text—streamlining your data management and automation processes.

Bulk actions and exporting

Boost.space's Bulk Actions and Exporting features allow you to update multiple records at once, edit fields in bulk, and export your data. These tools save time and simplify your data management process, making your workflow faster and more efficient.

Calculations on Columns

Boost.space offers a powerful tool to calculate key data metrics instantly. From counting empty and filled fields to determining unique records and percentages, this feature helps you analyze your data efficiently and make informed decisions.

Field groups

Boost.space Field Groups allow you to organize your data with ease, providing customizable options to select, add, and manage fields. Learn how to create a well-structured and tailored database using pre-designed or custom field groups.

System instance

Each instance is a tailored deployment for specific teams or organizations, encompassing users, modules, spaces, records, data, and configurations, ensuring independent operation and customization.

Boost.space AI Fields

Discover Boost.space's new AI Fields feature.This guide walks you through setting up your own AI Field for better data control and functionality.

Synchronize remote record

The Synchronize Remote Record Module facilitates easy data importation and updates within Boost.space, enhancing productivity and data accuracy.

SYNC Request in Boost.space system

Discover how to set up SYNC Requests in Boost.space for data synchronization with third-party applications, using Google Contacts as an example. Ensure data consistency and updates.

API token prioritization + Data consolidation

Learn the essentials of data consolidation in this guide. Prioritize tokens for efficient updates and maintain accurate datasets. Explore adjustable settings for enhanced consolidation.

Custom fields

Enhance your Boost.space modules and add-ons with custom fields. Learn how to create and integrate custom fields for tailored information storage, providing flexibility and efficiency in your workflows.

Key column

Unlock the potential of Boost.space's Key Column feature for seamless data consolidation. Customize Key Columns for each space and optimize import/export processes for accurate data management.

Actions and triggers

Maximize workflow efficiency in Boost.space with automated actions and triggers. Create actions in system settings, set triggers by module and space, and unleash the power of automation for streamlined processes.

Shared/personal labels

Enhance record organization in Boost.space with labels. Two types: personal (individual) and shared (visible to all). Admins set global labels; users create space-specific labels.

Notification

Stay informed with Boost.space notifications, receiving concise updates on significant events and changes that impact you. Enable notifications in your profile to stay in the loop and manage your tasks efficiently.

CUD Webhook in Boost.space system

Learn how to set up a CUD Webhook in Boost.space for data synchronization with external modules like Google Contacts, enhancing your data management capabilities.

Remote IDs

Discover how Remote IDs in Boost.space enhance data synchronization and third-party app integration, simplifying the management of external device records.

Polling triggers

Explore how Boost.space Integrator's polling triggers enhance automated data synchronization by periodically checking for updates, ensuring efficient and timely data management.

Boost.Space – Mobile App

Access your Boost.Space data on the go with the mobile app. Install it on Android from your profile section or on iOS via the App Store. Note that we're continually improving the mobile experience.

Sandbox environment

Explore new Boost.space features and workflows risk-free in the Sandbox environment. Learn how to access it, experiment, and collaborate without impacting your live production setup. Safety measures ensure a secure testing space.

Agency Account

Easily manage multiple Boost.space instances by using the same email address across systems and selecting the correct organization when switching. This feature streamlines workflow for users with multiple systems.

Comment

Boost.space's comments feature enables users to collaborate by leaving notes or questions on platform records, commonly found in modules like Tasks. Ensure effective communication while considering user permissions.

Attachment

Boost.space offers an attachment feature, allowing users to upload and manage files across various modules and add-ons. This enhances organization and

collaboration, supporting products, tasks, contracts, and more.

[Company design settings](#)
Tailor Boost.space design to align with your brand identity. Admins can customize logos, login screen, favicon, and system colors through design settings.

[SMTP Setup Guide](#)
Discover a step-by-step guide to configuring your SMTP server for efficient email delivery. This article covers everything from server settings and authentication to security and testing. Perfect for setting up system emails on Boost.Space or your preferred email provider.

[Menu Editor](#)
The Menu Editor in Boost.space allows admins to create, edit, and manage menus, enhancing user navigation and organizational workflow. Customize visibility, add users, and incorporate modules, folders, shortcuts, or embedded content to optimize your interface.
